### Option Expiry Underwriting Agreement

The Directors of Carrick Gold Limited ("CRK") are pleased to advise that the Company has entered into an Underwriting Agreement with Patersons Securities Limited with respect to Carrick's listed options ("CRKO"), with an exercise date of 31 December 2006 and an exercise price of 20 cents.

The total number of outstanding options as at the close of business on 15 November 2006 was 25,334,763, and the total underwritten amount is \$5,066,953.60. Patersons Securities Limited will receive a 3% underwriting fee.

The capital raised from the option exercise will be used for continued exploration at Carrick's Lindsays and Kalpini projects and for working capital purposes.

Carrick's Executive Chairman Frank Carr commented, "We believe that the underwriting of Carrick's listed options is a very positive development for Carrick as it provides certainty of funds for the further expansion of the Company's resources".

### **HIGH GRADE RESULTS AT LINDSAYS**

Drilling north of the current measured resource at Parrot Feathers has intersected a very high grade gold mineralised quartz sulphide vein set which is interpreted to extend to the north and south with a vertical orientation. Drill hole PFRC 301 (see details below) intersected **8 metres @ 29.6 g/t** from a down hole depth of 136 to 144 metres by assaying two 4 metre composite samples.

Drilling to further define the extent and down-dip orientation of this gold mineralised vein set, which is believed to be one of several, is continuing.

Drilling in this recent programme has also extended the Parrot Feathers resource model further to the north following a northerly plunge of the mineralisation.

Carrick Gold Options	AU\$0.66

## Highlights

A recently completed R.C. drilling programme of 79 holes at New Discovery, located to the west of Parrot Feathers, has identified mineralised structures over a distance of approximately 800 metres (see Figure 1).

Zones of mineralisation and alteration have been determined with similar characteristics to the Eastern Structure which hosts a resource exceeding 1 million ounces of gold.

One metre samples are currently being assayed with results expected this month.

Drilling of the high grade shoots at north Parrot Feathers on the Eastern Structure is continuing with a resource upgrade being undertaken coupled with an independent audit review of all of Carrick's gold resources.

## **FURTHER HIGH GRADE DRILL RESULTS**

### **DRILLING EXTENDS RESOURCE NORTH OF PARROT FEATHERS**

Further impressive drill results have been received including **4 metres at 50.22 grams per tonne gold** as shown in Table 1.

Drilling targeting this high grade vein set is continuing with results from four holes still outstanding. The geology from inspection of R.C. chips indicates very similar mineralisation and thickness.

Hole PFRC303 was drilled 40 metres past the previous northernmost hole and intersected good values of gold at the targeted depth in a sediment. The structure is still open to the north and several more holes are planned to hit the mineralised structure a further 80 metres to the north.

Recent results are expected to significantly enhance Carrick's gold resource.
